Tanish Jain

Machine Learning Engineer — Samsung R&D Bangalore | Computer Vision & Deep Learning Research | NIT Rourkela MTech
Raurkela, Odisha, India

Summary

Pursuing a Master of Technology in Signal and Image Processing at NIT-Rourkela, with a Bachelor of Technology in Electrical, Electronics, and Communications Engineering from Assam (Central) University. Currently contributing as a Software Developer Intern at Samsung R&D Institute India - Bangalore, focusing on creating an innovative out-of-distribution (OOD) detection pipeline using CLIP-based techniques for live screenshot analysis. Gained hands-on experience in image processing, machine learning, and data curation techniques in dynamic environments. Actively driven to leverage advanced AI and machine learning methodologies to develop impactful solutions in computer vision and related fields, with a focus on merging cutting-edge research with practical applications.

Experience

Samsung R&D Institute India - Bangalore

Software Developer Intern

January 2026 - July 2026 (7 months)

Bengaluru

I played a pivotal role in creating an innovative OOD detection pipeline that utilized CLIP-based techniques for live screenshot analysis.

- Extracted and modeled text semantics from images, merging OCR and vision-language scores into a unified OOD score.
- Improved real-time image analysis efficiency through strategic feature aggregation and statistical selection methods.
- Gained hands-on experience in image processing, machine learning, and data curation techniques within a leading tech environment.

PRISM, NIT Rourkela

PG Researcher

January 2025 - January 2026 (1 year 1 month)

Raurkela

My experience as a PG Researcher involved pioneering research in aerial image object detection and multimodal settings.

- Developed innovative models like GeoStatNet and GFCR-Net, showcasing advanced detection capabilities.
- Collaborated on various research papers, including SAPNet and TSRNet, enhancing the field of image analysis.
- Gained expertise in complex image processing techniques and multimodal detection strategies.

Upwork

Freelance Deep Learning Engineer

November 2023 - February 2024 (4 months)

I successfully developed a deep learning model for tumor classification, achieving high accuracy in digital pathology.

- Conducted comparative analysis to validate model performance and ensure reliability in tumor identification.
- Ensured compatibility with pathology images, enhancing the model's usability in clinical settings.
- Gained expertise in AI, machine learning, and deep learning methodologies through extensive research and application.

Navodita Infotech

Data Science Intern

November 2023 - December 2023 (2 months)

I played a key role in developing a recommender system for an e-commerce platform, focusing on user personalization and system integration.

- Utilized TensorFlow Recommender System to create an effective recommendation engine.
- Implemented machine learning algorithms to analyze user preferences and improve accuracy.
- Worked closely with the development team to integrate the recommender system into the existing website infrastructure.

Malaviya National Institute of Technology Jaipur

Computer Vision Intern

June 2023 - July 2023 (2 months)

Online

I actively contributed to the development of a Proof of Concept for PCB defect identification, focusing on deep learning methodologies.

- Trained a YOLOv7 model on a PCB defect dataset, enhancing detection capabilities.
- Developed a web application for real-time defect identification, ensuring user-friendly access to results.
- Collaborated with team members to achieve project milestones, fostering a productive team environment.

Education

National Institute of Technology Rourkela

Master of Technology - MTech, Signal and Image Processing · (August 2024 - May 2026)

Assam (Central) University

Bachelor of Technology - BTech, Electrical, Electronics and Communications Engineering · (2020 - 2024)

Jawahar Navodaya Vidyalaya (JNV)

XII (PCM) · (April 2017 - March 2019)

Jawahar Navodaya Vidyalaya (JNV)

X · (April 2016 - March 2017)
