

🔍 I'm looking for...

Tanish Jain

Machine Learning Engineer — Samsung R&D Bangalore | Computer Vision & Deep Learning Research | NIT Rourkela MTech

← Projects

C Android Camera ISP

Built a C/C++-based Android camera Image Signal Processing (ISP) project focused on low-level camera-frame processing and real-time imaging workflows. Implemented modular image-processing components for raw camera data, emphasizing efficient computation, debugging, and mobile/embedded imaging constraints.

Skills: Image Processing, C++, +2 skills

Conversational Fashion GenAI

Create a conversational chatbot for e-commerce website
Use LLM model and different machine learning techniques
For any query from user side it will search trending fashion on social media and compare with database of e commerce website and show best results
Link :<https://github.com/tanish1403/flipkart-grid-5.0>

Skills: Multi-agent Systems, Generative AI, +6 skills

Face Recognition Attendance system

To Make a face recognition attendance system
Use facenet-model for face detection
It's based on transfer learning technique applied on facenet

...based on transfer learning technique applied on resnet model.

Skills: Machine Learning, Python (Programming Language), +2 skills

Heart Disease Prediction

Apply basic data analytics methods and EDA techniques to make data representable. Apply multiple machine-learning techniques for making predictions using data i.e. SVM, Linear models, XGBoost, Random Forest, Naive Bayes, KNN etc
Link : <https://github.com/tanish1403/heart-disease-prediction-using-machine-learning>

Skills: Machine Learning, Data Science

LLM based automatic query engine

Build a LLM based query engine which can query any uploaded csv database.
Convert all data in csv file into embeddings and store it in Quadrant (vector Database).
Use open AI for querying and creating embeddings

Skills: Multi-agent Systems, openai, +3 skills

Liver and Tumor Segmentation in 3D CT Scan Images

Associated with Assam (Central) University

Contributed to a research-based project aimed at developing a proprietary 3D deep learning model for segmenting the liver and tumor from 3D CT scan images. Utilized TensorFlow alongside numpy and pandas for model development, focusing on achieving a higher Dice score for improved segmentation accuracy. Collaborated with team members to implement advanced techniques in handling 3D medical image data, optimizing model performance, and robustness.

Skills: Pandas, NumPy, +6 skills

NeuralFlow

Designed a no-code/low-code platform for building DL pipelines via drag-and-drop blocks.

Integrated GenAI-based suggestions recommending layers and preprocessing steps for non-experts.

Frontend built with ReactFlow for interactive visualization; backend powered by TensorFlow

Skills: TensorFlow, TypeScript, +1 skill

Other contributors

Small Ship Detection in High-Resolution Aerial Images

Associated with National Institute of Technology Rourkela

Focused on detecting small ships in aerial images under fog, sea clutter, and occlusion.

Proposed an architecture integrating frequency isolation, contextual reasoning, and physics-aware techniques for robust oriented bounding box detection.

Train and test over large dataset like SCCOS, FGSRCS, HRSC2016 and DOTA.

Edge Deployment over Jeton Nano Orin.

Skills: Object Detection, Deep Learning, +6 skills
